

Climate protection: Survey on mobility of students and staff at Humboldt-Universität

Humboldt-Universität has set itself a major goal: it wants to become climate-neutral by 2030, i.e. final energy consumption and greenhouse gas emissions should be significantly reduced. As part of the preparation of a climate protection concept for the HU, participation in a short anonymous survey on mobility by students and employees is requested.

The aim of this survey is to create a basis of information with which the potential for developing climate-friendly, efficient and student- and employee-friendly mobility strategies can be developed. The results will be used to determine and evaluate the university's greenhouse gas emissions and to develop strategies. The development of a climate protection concept and the implementation of climate protection measures can make an important contribution to saving university greenhouse gas emissions.

Only about 15 minutes are needed to participate in the survey - thank you for your support!

Data protection

Individual identity cannot be inferred from the answers. The data will be processed confidentially and only for the stated purpose. All survey data will be evaluated in anonymised and aggregated form, so that no conclusions can be drawn about individual persons in the results.

Consent to participate is voluntary. Refusal or non-participation will not result in any disadvantages. Participation in the survey can be cancelled at any time and the data will then be deleted immediately. Irrespective of this, the data will be deleted after completion of the project (04/2023).

The project is supported in data protection matters by the Data Protection Officer of the Humboldt University of Berlin (datenschutz@uv.hu-berlin.de), whose advice has already been taken into account.

Get in touch

If you have any questions or comments, Wiebke Hampel - responsible head of climate protection management - is at your disposal.
