

Survey: Identifying infection risks and making work at Humboldt-Universität safer

Rapid tests in the office, access controls at the entrances and lots of new rules for working with colleagues. In the past two years, Humboldt University, above all the Technical Department, has also had to regularly adapt to the pandemic and implement new regulations. Not an easy task.

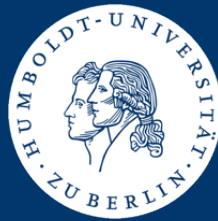

With the participation in a survey among all employees, the management of the pandemic at Humboldt University can now be evaluated in order to uncover any weaknesses and to make the handling of the next challenges more efficient. The more employees participate, the more knowledge will flow into improving future pandemic management!

[Take part in the survey now](#)

Background

As a member of AGUM e.V., an association that serves universities as a platform for cooperation in occupational health and safety, the HU is actively involved in the "Working Group on Dealing with the Pandemic". A master's thesis being written in this context by student Fabian Kahlenberg aims to develop a supporting guideline for pandemic planning at universities based on the survey results.

The survey takes about eight minutes and is open until 21 January. The data collected is completely anonymous.
