Bewerben Sie sich bei Humboldt-Universität zu Berlin – einer der besten Universitäten der Welt.

**FACULTIES, CENTRES, INSTITUTES**

**FACTS & FIGURES**

- **Students**: 34,214 students in winter semester 2015/2016
  - **Female**: 19,637
  - **Male**: 14,577
- **Budget**: 384 million euros total, 104 million euros of which is from third-party sources (2016/2017)
- **Humboldt-Universität**
  - **Faculty of Arts and Humanities I**
    - Classical Philology
    - Slavic Studies
    - German Studies and Linguistics
    - German Literature
    - Library and Information Science
    - History
    - Philosophy
  - **Faculty of Natural Sciences**
    - Biology
    - Chemistry
    - Geography
    - Computer Science
    - Mathematics
    - Physics
    - Psychology
  - **Faculty of Arts and Humanities II**
    - German Literature
    - Germanic Studies and Linguistics
    - Scandinavian Studies
    - Romance Literature and Linguistics
    - English and American Studies
    - Slavic Studies
    - Classical Philology
- **Clusters of Excellence**
  - Berlin-Brandenburg School for Regenerative Therapies
  - Berlin School of Mind and Brain
  - Berlin-Brandenburg School for Graduate School of Analytical Chemistry
- **Research**
  - **Professorships**: 57 special professorships, 7 endowed chairs
  - **Students**: 34,214 students in winter semester 2015/2016
- **Quality**
  - **World Reputation Ranking**: 3rd place
  - **German Research Foundation research rankings**: 41st place
- **Sustainability**
  - **12 Collaborative Research Areas**: polymer chemistry, bio-organic chemistry, nanotechnology, life sciences, computer science, cultural studies, environmental science, education, cognitive science, theory of space and knowledge, and computer science.
- **Innovation**: Humboldt-Universität brings its tradition as a university with young, independent researchers to fruition with its support for young academics: Excellent researchers and clusters and eleven interdisciplinary centres. Three integrated research clusters. It established the Humboldt Graduate School as an umbrella organization for graduate studies to improve the training of doctoral students.

**ADRESSEN & KONTAKTE**

**Central Postal Address**

Humboldt-Universität zu Berlin
Unter den Linden 6
10117 Berlin

Phone: +49 30 2093-0

    - **Friedrich Schlegel Graduate School of Library Studies**: computer science and library science

**Humboldt-Universität zu Berlin**

www.hu-berlin.de
The university has undergone many changes over the past 200 years. After an extraordinary process of restructuring and renewal after the political changes in 1990, it drew in academics and scientists from both the East and West, Germany and abroad. In 2016, Humboldt-Universität was among the top five in the German Research Foundation research rankings, and it is in 41st place worldwide in the World Reputation Ranking and 3rd place in Germany.

**EXCELLENCE INITIATIVES**

Humboldt-Universität zu Berlin has been one of the eleven German Excellence Universities since June 15, 2012. It was successful in the second stage of the Excellence Initiative for all three funding lines and has gained wide recognition for its pioneering concept “Education through Science: Personality – Orientation – Openness”.

Humboldt-Universität uses all of its resources to ensure it is a place for excellent research and teaching. It promotes young talent and also wants to have a positive effect on the economy and society beyond the university.

Each year, over 6,000 people decide to study at Humboldt-Universität located in the heart of Berlin. There are few other places where you can choose from 190 degree programmes, from Agricultural Science to Asian Studies.

In 2001, Humboldt-Universität was one of the first universities in Germany to introduce Bachelor and Master’s degree programmes. “Humboldt-Universität” is a name recognized worldwide, and its internationally recognized degrees open doors for its graduates.

Students complete their studies at historically important institutes in Berlin Mitte, the North Campus, or the Mathematics and Natural Sciences Campus Berlin Adlershof. At the Jacob and Wilhelm Grimm Centre, the largest open-stacks library in Germany, students can access over two million books and periodicals directly or order them online.

Students also enjoy an exceptionally rich variety of activities outside of their studies. There are over 80 different sports and recreation groups at Humboldt-Universität. The Language Centre offers a variety of language courses, which are used by over 10,000 students each year.

Humboldt-Universität also offers a dense network of advising and counselling services for its students, which go beyond ordinary student services. It offers legal, social, and psychological services, childcare in Mitte and Adlershof as well as special services for top athletes.

**STUDY IN THE HEART OF BERLIN**

Students also enjoy an exceptionally rich variety of activities outside of their studies. There are over 80 different sports and recreation groups at Humboldt-Universität. The Language Centre offers a variety of language courses, which are used by over 10,000 students each year.

Humboldt-Universität also offers a dense network of advising and counselling services for its students, which go beyond ordinary student services. It offers legal, social, and psychological services, childcare in Mitte and Adlershof as well as special services for top athletes.
The ground-breaking ideas from 1810 remain relevant today. Wilhelm von Humboldt as well as his contemporaries promoted research independence, the integration of humanities and the natural sciences and the unity of teaching and research over 200 years ago.

The university modelled on their ideas opened in 1810 and quickly developed into a lively place for discussion for respected scholars including the philosopher Hegel, the legal scholar Savigny and the physician Hufeland.

After the founding of the German Empire in 1871, the Berlin alma mater become the largest and most prestigious university in Germany. Humboldt’s ideas spread across the world, and many universities were founded on the same principles. Today, it is one of the leading universities in Germany.

Humboldt-Universität is expanding collaboration with selected universities throughout the world at the levels of research, teaching and extramural institutions in their respective regions and include the University of Sao Paulo, the National University of Singapore and Princeton University.

Humboldt-Universität maintains academic partnerships with over 175 universities. Traditionally, it has close ties to North, Central, and Eastern Europe and cooperates with universities in the USA, Asia, Cuba and South Africa. The university has for years operated the largest programme for the German Academic Exchange Service’s (DAAD) support of partnerships with the East, and with over 100 fellows is ranked at the top of German universities.

Student mobility is a major focus at the university; more than 800 students complete a part of their studies abroad, and about 1,200 international students study abroad at HU. Each year, about 800 researchers from all over the world spend time at Berlin’s oldest university. The International Scholar Service (ISS) helps doctoral students and researchers from abroad orient themselves easily in the university and the city.

The humanities, social sciences, economics and theology are housed at the historically important Mitte Campus. The IRI THESyS, which brings together scientists and scholars from the humanities and natural sciences for research on sustainability, is also located in Mitte.

Research and teaching on the life sciences at Humboldt-Universität takes place at the traditional location on the North Campus near Charité. The Faculty of Life Sciences works together here with institutes such as the Bernstein Centre and the Berlin School of Mind and Brain as well as the NeuroCore, UniCat, and Image Knowledge Design excellence clusters. The IRI for Life Sciences at HU has the important function for supporting collaboration between Charité and the Max Delbrück Centre.

Mathematics and the natural sciences have their home at the Adlershof Campus. The campus is part of the “city for science, economics and media”: Scientists from Humboldt-Universität research together at the Technology Park in a lively exchange with ten extra-university research institutions and over 400 technology-oriented companies. This collaboration is also evident in the SALSA graduate school and the IRIS Adlershof, which joins various disciplines with extra-university institutions and business under one roof.

Humboldt-Universität has a treasure trove of objects from over 300 years of teaching and research – there are over 30 million objects from the humanities, social sciences and natural science. They are cared for and maintained at the university’s institutes, faculties and libraries and used in teaching, research and exhibitions.

The Helmholtz Centre of Cultural Technology’s databank and scientific cabinet includes current and former collections from Humboldt-Universität. It focuses on zoological objects, medical history, images of scholars, and other images as well as recordings from the sound archive. Since 2004, the University Collections in Germany has been managed at the Helmholtz Centre.

Additional collections historically and institutionally connected with Humboldt-Universität can be found in the Berlin Museum of Medical History and other institutions at the Charité – Universitätsmedizin Berlin as well as the Museum of Natural History – Leibniz Institute for Research on Evolution and Biodiversity at Humboldt-Universität Berlin.

The university will publicly exhibit a part of its collection across the street from the main building at the Humboldt Forum in the Berlin City Palace, which is currently under construction.
The ground-breaking ideas from 1810 remain relevant today. Wilhelm von Humboldt as well as his contemporaries promoted research independence, the integration of humanities and the natural sciences and the unity of teaching and research over 200 years ago.

The university modelled on their ideas opened in 1810 and quickly developed into a lively place for discussion for respected scholars including the philosopher Hegel, the legal scholar Savigny and the physician Hufeland.

After the founding of the German Empire in 1871, the Berlin alma mater becomes the largest and most prestigious university in Germany. Humboldt’s ideas spread across the world, and many universities were founded on the same principles. 29 Nobel prize winners including Max Planck, Robert Koch, and Fritz Haber conducted research here. Otto von Bismarck, Heinrich Heine and Karl Marx were also enrolled as students at Humboldt-Universität.

During the Third Reich (1933 to 1945), the university was a place for silent conformity and enthusiastic support for the National Socialist system but unfortunately only rarely a place that offered resistance. A new beginning after the physical and moral rubble was difficult. Teaching began again in 1946 in badly damaged buildings under the watchful eye of the Soviet occupation. In 1949, the university was named after the brothers Alexander and Wilhelm von Humboldt.

The research contents, procedures and conditions were altered under the influence of the DDR university reforms of 1951 and 1967/68 in keeping with Communist ideology. After German reunification in 1990, the university had the opportunity to strike out on a new path while also building on its older traditions. Today, it is one of the leading universities in Germany.

The humanities, social sciences, economics and theology are housed at the historically important Mitte Campus. The IRI THESys, which brings together scientists and scholars from the humanities and natural sciences for research on sustainability, is also located in Mitte.

Research and teaching on the life sciences at Humboldt-Universität takes place at the traditional location on the North Campus near Charité.
